

Note on study habits

This file is a Slice-2 PDF fixture for Ilmwiki extraction. The content is deliberately domain-neutral. The patterns below trigger the deterministic candidate extractor.

Concept: Deliberate practice

Concept: Deliberate practice — a learning approach where the learner sets a specific narrow goal, attempts it, and receives immediate corrective feedback before re-attempting.

Why it matters

Informal repetition without feedback rarely produces durable improvement. The distinction is mechanical, not aesthetic.

"Practice without feedback is rehearsal of mediocrity, not improvement."

Closing

Deliberate practice is not the same as repetition.
